What We Have Paid Lately

- A Clinical Trial test subject sued for permanent vision loss due to failure to warn of risks associated with injectable filler material. Suit included allegations of negligence against the insured, the Principal Investigator and the Clinic, as well as strict products liability against the insured. We had concerns regarding inconsistent versions of Informed Consent documents among other issues. The demand was \$12 million and we were able to settle the case at mediation for \$4.25 million.
- A company sued our medical device maker for \$5.26 million because they alleged that the vials they manufactured delaminated and caused contamination of their product. While liability was not at issue, we retained a forensic accountant and validated damages in the amount of \$3.31 million which is what we settled the suit for.
